

MARKET TARGETING ANALYSIS

Duct-Age Neighborhood Report Raleigh Metro Service Zones

Subdivisions where the housing stock is predominantly 15–20 years old (built 2006–2011), mapped around three crew locations for route-based residential prospecting.

TOTAL HOMES BUILT 2006–
11 IN BOTH ZONES

2

CREW-ANCHORED SERVICE
ZONES

This analysis identifies every subdivision within roughly four miles of the crew's three home addresses where the majority of houses were built between 2006 and 2011. It is built from Wake County assessor parcel records — actual year-built data on 43,000 residential parcels — not marketing estimates. Each subdivision is tiered by how concentrated the target-age housing is, sized by home count, and located by distance from the nearest crew member.

Bottom line: Southeast Raleigh (around Marcus and Devin) is the priority market — 33 qualifying subdivisions and 4,143 homes built in the window, led by Battle Ridge North (~300 homes, 92% in-window). The Willow Spring / Fuquay-Varina zone around Benny is smaller (1,535 in-window homes) but has larger houses and near-zero drive time: two qualifying subdivisions sit on Benny's own street.

Why the 2006–2011 age band converts

Houses in this band share three traits that make duct cleaning an easy sell. First, they are on original builder-grade flex duct and panned returns that have never been serviced — including construction debris sealed into the runs at build time. Second, the original HVAC equipment is at or past its 15–20 year end-of-life, so owners are already in replace-or-repair conversations where coil condition and protecting a new system are live topics. Third, most of these houses have turned over at least once; second and third owners inherit ductwork with an unknown history and no service record.

Age distribution of the housing stock

Homes by year built within each 4-mile zone (single-family and townhome parcels). Shaded band marks the 2006–2011 target window. The SE Raleigh spike is the mid-2000s building boom that makes that zone the priority.

Zone 1 — Southeast Raleigh

Anchor: Marcus & Devin (Calumet Dr / Ogilvy Ct, Raleigh 27610) · 33 qualifying subdivisions · 2,375 homes in target phases

Read of the zone

The mid-2000s boom built out this entire quadrant at once, so qualifying subdivisions sit shoulder to shoulder. The inner ring (≤ 2.5 mi from the guys) alone holds Anderson Pointe, Neighborhoods of Walnut Creek, Edgewater Townhomes, Dowling Ridge, Augusta Landings, Sunnybrook Estates, and Fieldstone Crossing — a full day's door route without leaving a 5-minute drive radius.

The outer band (Battle Ridge North, Tryon Place, Chasteal Trails, Griffis Glen, Macadie Park) clusters along the Rock Quarry / Battle Bridge corridor to the southeast and is the single densest concentration of target homes in either zone.

Townhome communities (Edgewater TH, Pine Knoll, Bison Court, Mingo Creek, Dowling Ridge) are smaller, faster jobs — and each has an HOA, which is the bulk-contract angle: one board approval can book a street.

Zone 2 — Willow Spring / Fuquay-Varina

Anchor: Benny (Eagle Chase Dr, Willow Spring 27592) • 19 qualifying subdivisions • 586 homes in target phases

Read of the zone

Growth here ran along the Hwy 42 / NC-55 corridor toward Fuquay-Varina, so nearly every qualifying subdivision sits northwest of the anchor. Sterling Ridge is the standout (97% in-window), with Lakestone Village, Bloomfield, Rowland Meadows, and Inglennook at Willow Creek forming a tight Fuquay cluster.

Median home sizes run larger than Zone 1 — Harrison Place and Hampton Park Estates average ~2,850 sq ft — which means more supply runs per job and higher tickets.

Benny's own Stamey's Walk and neighboring Westmoor both qualify at ~50–54%. Half the homes on his street are warm leads, and a truck parked in the driveway is free advertising to the exact demographic.

Coverage note: Wake County data stops at the county line. The Cleveland / 42 East side (Johnston County) had the same-era boom and is not counted here.

Recommended plays

- 1. Route days, not scattered leads.** Zone 1's inner ring supports full-day door-hanger or knock routes with near-zero windshield time between subdivisions. Battle Bridge corridor (Battle Ridge North + Tryon Place + Chasteal Trails ≈ 585 target homes) is one campaign.
- 2. HOA bulk contracts for townhomes.** Five townhome communities totaling ~500 units, each governed by one board. A per-unit group rate pitched to the HOA converts one meeting into weeks of scheduled work.
- 3. Ride the replacement wave.** Every one of these homes is in HVAC replacement territory. Duct cleaning pairs naturally with new-system installs — "protect the new equipment" — and positions CQA for referral flow from installers working these same streets.
- 4. Crew-street proof of work.** Jobs done on Eagle Chase Dr / Stamey's Walk and around Calumet Dr give visible, local before-and-after references inside qualifying neighborhoods.

Methodology

Source: Wake County GIS tax parcel service (Property/Parcels), pulled August 20, 2026. Universe: residential parcels (single-family and townhome use codes) with recorded year built, within a 4-mile envelope of each anchor address — 12,898 parcels (Zone 2) and 30,077 parcels (Zone 1). Subdivisions identified from parcel legal descriptions with phases merged. Qualification: ≥25 homes and ≥50% built 2006–2011. Tiers — Prime: ≥80% in-window and ≥55 homes; Strong: ≥60%; Secondary: 50–60%. "Homes" counts parcels in qualifying phases; a few totals understate full neighborhood size where older/newer phases fell below the cutoff. Distances are straight-line from the anchor. Type: SFH = single-family; TH = townhome (median under ~1,500 sq ft or platted as townhomes). One crew address (Ogilvy Ct) does not resolve in county records; the Zone 1 anchor uses the verified Calumet Dr address, which covers both crew members' area.
